February 2011

As part of Kusmaul Electronics Co., Inc. policy of continuously improving and enhancing the product line, the Pump Plus 1200, Model Number: 091-9-1200, is being updated. On April 1, 2011 the new unit will be introduced.

The new charger is functionally and physically identical to the older unit except for the power inlet connections and the bar-graph indicator output connector. Many internal changes have been made to increase reliability and longevity of the charger. A circuit breaker in the power inlet line replaces the fuse for ease of maintenance. The cooling fan now responds to current rather than to temperature. This starts the fan as soon as the output current indicates that increasing cooling will be required. Rather than waiting for heat to build up the fan starts immediately. A new output current sensing circuit not only has lower power dissipation but also drives the fan control. The power input is via a 3 terminal strip rather than a line cord. This eliminates the need to cut and terminate the line cord. The bar-graph Indicator and charger mounting remain unchanged.

There is no change in price for the new model.

In the future other chargers will be updated. We will always provide you with adequate notification of any changes. Enclosed is a copy of the instruction manual for the updated model.

We thank you for using Kusmaul Electronics Co. Inc. products and look forward to serving you in the future.

Very truly yours,

Kusmaul Electronics Co. Inc.

Michael F. Guzman, Sales Manager
